## Performance vs Objectives

### 2011-2015 OBJECTIVE<sup>1</sup>

5% reduction in energy consumption and GHG emissions from building sources (use of electricity and natural gas) by 2015, using 2011 as a baseline.

### 2011-2020 OBJECTIVE<sup>2</sup>

8% reduction in energy consumption and GHG emissions from building sources (use of electricity and natural gas) by 2020, using 2011 as a baseline.

### PERFORMANCE

7.2% reduction in 2015, using 2011 as a baseline.

### GHG EMISSIONS FROM ELECTRICITY AND NATURAL GAS USE<sup>3</sup>

(Based on 2011 baseline; in tonnes of CO<sub>2</sub> equivalent)

<sup>3</sup> The increase in GHG emissions from electricity and natural gas use from 2014 to 2015 was mainly due to increased natural gas consumption as a result of a colder than normal winter and a change in building equipment.
